PLEASE NOTE	Only the best raw hides are used for Pure-Aniline leathers. The natural characteristics such as insect bites, fat wrinkles, growth marks and healed scars can still be visible, a sign of a superior leather with individuality. Pure-Aniline leathers do not have any protective coating or pigment on the surface and are therefore more susceptible to fading from sunlight exposure. Care should be taken in high traffic areas where food and drink spillages could stain the leather. Results from performance tests are guidelines only.
