PLEASE NOTE

- Only the very best raw hides are used for Pure-Aniline leathers
- The natural characteristics such as insect bites, fat wrinkles, growth marks and healed scars can still be visible, a sign of a superior natural leather with its own individuality
- Pure-Aniline leathers do not have any protective coating or pigment on the surface and are therefore more susceptible to fading from sunlight exposure
- Care should be taken in high-traffic areas where spillages could stain the leather
- Results from performance tests are guidelines only

CARE

- Leather Care for Aniline Leathers is available from our website
